Internet Connection Lasts 5 Minutes, I've Tried All the Things
2019/10/12

Last week I set up a new router for my landlord (Netgear R7900P). This week, the internet stopped connecting (per the router login), and I tried the following steps: 1. Power cycled router (unplugged for 60 seconds) —> nothing 2. Power cycled modem & router (unplugged both for 60 seconds, including all modem cables) —> internet connected for maybe 5 minutes 3. Updated the router's firmware (with NO devices connected) —> no internet connection post-update 4. Reset the router to factory settings post-update —> internet connected for 5 minutes 5. Turned off DHCP settings > rebooted > returned DHCP settings > rebooted (I have no idea if this was necessary - I'm a Googler, not a tech person) —> nothing Other info: My landlord hosts batches of Airbnb guests, so there are several different connections daily, and they also change daily (so no possibility for a Static IP). My landlord also lets some dude keep a server in the house, of which I know nothing, and the guy is of no help. Any suggestions/solutions are appreciated!
