Need WiFi Help - [Solved]

2019/12/30

Looking for some help with potentially boosting my wireless speed or making it more stable. I recently moved into the first floor of an apartment for the summer. My downstairs apartment picks up the wifi, but speeds bounce from 1mb/s download to up to 60 mb/s. My computer is running an ASUS PCE AC56 wireless card with two antennas. I'm wondering if there is any way to boost my signal through the use of a router or something along those lines. I have no access to the main router itself. Also worth mentioning, there is a cable outlet right next to my computer. So maybe I could run internet through there somehow? Any ideas or help would be greatly appreciated. Thx.
